ACN R1: trained forecasts do not reproduce oracle gains
A. Rare events and temporal shift
Sustained recovery (%)
Within 15 min
Within 60 min
Office train
Office dev
Office test
Caltech
JPL
B. Frozen models, no external retuning
Brier score at 60 min (lower is better)
empirical
elapsed logistic
full logistic
full gbdt
Office test
Caltech
JPL
C. Conditional six-EV service, 36A feeder
30A recovery assumption; synthetic requests
Seed intervals conditional on sampled episodes
Delivered kWh difference vs 20-min probing
Learned CDF
Full survival oracle
Office test
Caltech
JPL
D. Error sensitivity does not transfer
Delay weight = 4; day-clustered 95% intervals
Normalized cost, not observed money or energy
Discovery cost difference (lower is better)
Natural forecast
CDF + 0.2 stress
Office test
Caltech
